THE POWER OF ROOF RESTORATION

Before & After Photos of Roof Restorations

Roofing systems worldwide face extreme conditions, from UV exposure and thermal shifts to wind, salt, and freeze-thaw cycles. With decades of experience, we've developed durable products for metal, concrete, and flat roofs, that come together to form reliable, all-climate restoration systems. In this edition, we take a look at roof transformations made possible with our systems.

TRUSTED ROOF SYSTEMS FOR EVERY ROOF TYPE, WORLDWIDE

For over 50 years, Topps Products has been a trusted name in high-performance roof coatings, sealants, and repair systems. Engineered for **reliability, durability, and versatility**, our restoration solutions give contractors the confidence to **restore, protect, and extend the life of any roof**, anywhere in the world.

Why contractors around the world choose Topps Products®:

- **Proven Reliability:** Built to withstand extreme weather, UV exposure, and temperature swings.
- **Versatile Solutions:** Designed for every roof type, from metal and concrete to flat and specialty surfaces.
- **Performance & Protection:** Delivers superior waterproofing, energy efficiency, and long-term durability.
- **Global Expertise:** Trusted by contractors globally to deliver results in any climate.

With decades of proven success, we continue to deliver innovative, industry-leading systems that make roof restoration easier and more dependable. In this issue, we're highlighting some of our most-used systems for metal and concrete roofs.

RESTORING METAL ROOFS: BEFORE & AFTER

Metal roofs are known for their strength and longevity, but over time they can be compromised by UV exposure, moisture, thermal shock & corrosive environmental elements. Oxidation, surface wear, and faded coatings reduce protection and increase the risk of leaks and structural damage.

System 1000/1000E, from our E-Systems Manual, was designed as a complete restoration solution for metal roofs, renewing their performance, extending their lifespan, and offering a cost-effective alternative to full replacement.

Let's break down **System 1000/1000E**:

- RustArrestor™: Neutralizes existing rust and prevents future corrosion.
- Polyprene®: Seals seams, flashings, and vulnerable areas to prevent leaks and water infiltration.
- PolyCore™: Adds structural strength to the roof system.
- Seam/RivetGuard™: Provides extra protection to seams and rivets, areas prone to wear and potential leaks.
- Topps Seal®: Delivers a protective, reflective, waterproof barrier that reduces heat absorption and protects against UV damage.

Together, these products form a reliable, long-lasting roof system that performs like new and delivers dependable protection, **even in the toughest conditions.**

CONCRETE ROOF RESTORATION

Concrete roofs are built to last, but over time they face cracking, surface wear, and water intrusion that can compromise structural integrity and interior protection. These challenges are often accelerated by UV exposure, thermal cycling, and the natural porosity of concrete, which can allow moisture to penetrate and cause long-term damage.

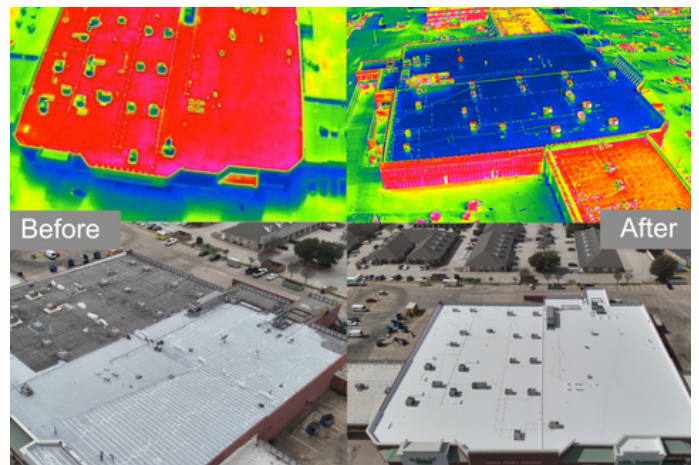

That is why we developed [System 1100](#) , specifically engineered to address these issues in concrete roofs. It restores concrete roofs with a seamless, high-performance coating system that strengthens, waterproofs, and protects the surface, extending the roof's lifespan while improving energy efficiency and durability.

Let's explore System 1100:

- [ClearSeal™](#): Fills small cracks and imperfections to restore a uniform surface.
- [Polyprene®](#): Strengthens seams, flashings, and other vulnerable areas to prevent leaks.
- [PolyCore™](#): Adds structural resilience to withstand movement and stress.
- [Topps Seal®](#): Delivers a reflective, waterproof layer that protects against UV exposure and reduces heat absorption.

By combining waterproofing, crack resistance, and structural reinforcement, System 1100 transforms aging concrete roofs into strong, resilient, and energy-efficient surfaces.

PRODUCT SPOTLIGHT

Quickly and easily reinforces critical areas

Stays flexible and resists cracking, even in cold weather

Easily incorporates PolyCore™ for extra strength

Bonds to damp metal surfaces for emergency repairs

Polyprene® is an all-rubber, fiber-reinforced repair compound designed for long-lasting fixes on most roof types. Ideal for sealing seams, cracks, and flashings, it resists mud cracking, stays flexible in cold weather, and adheres even to damp metal surfaces, making it perfect for both routine and emergency repairs.

TIPS WITH TOMMY & TAMMY

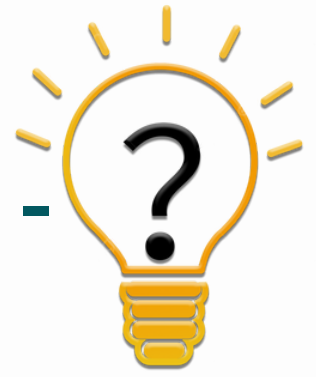

Hey Tammy! I'm getting ready to restore my roof, but I've noticed a few weak spots and surface cracks. What's the best product to repair those areas before I apply the roof coating?

Hey Tommy! For those weak or cracked areas, I'd recommend using Polyprene. It's an all-surface, all-climate repair compound that's perfect for sealing cracks, seams, and more. It stays flexible, won't crack when cold, and even sticks to damp metal if you need to make quick repairs. Just apply it thick in one layer, and you'll have a solid surface ready for coating in no time!

TEST YOUR KNOWLEDGE - TAKE THE TOPPS TEST

Which feature makes Polyprene® ideal for repairing cracks, seams, and flashings on most roof types?

A

It dries instantly and becomes completely rigid

B

It's fiber-reinforced, flexible, and prevents mud cracking

C

It only works on dry surfaces

D

It is designed for interior use only
